GO3D / CUSTOM BETA DEVELOPMENT

Guten Morgen, Stan and Bill!

Meet Beer Man.

Drink. Bite. Explore parts. Send your changes back.

Project-team review | R103 apps + R104 collar study | 27 Oct 2026

MEET BEER MAN / PLAY THE TOUR

WATCH THE 48-SECOND VIDEO

OPEN THE PROTOTYPE PARTS

The first delivery proved the concept.

Bill reported that he could use the first files and perform SolidWorks cuts without crashing. GO3D used that feedback to improve the file structure and the review workflow.

Smaller steps. Clearer files.

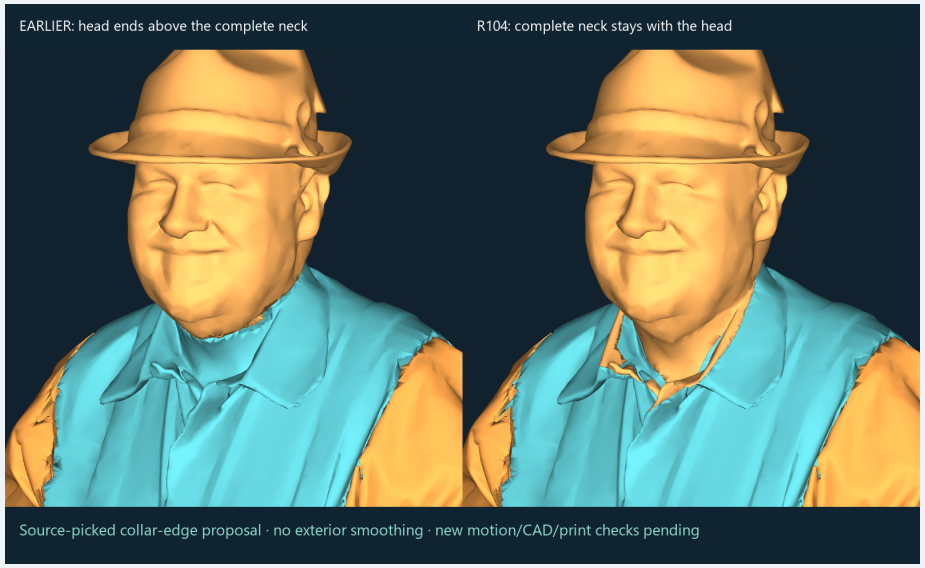

Start with the 8.2 MB P01 part ZIP instead of the 826 MB all-source archive. Separate parts, dates and source identities are explicit. This reduces download scope; it does not mean every CAD face was simplified.

Keep the work you already did.

Email your existing edited files, a marked image or measurements back to GO3D. We preserve the originals, compare your changes and migrate supported intentions into a new revision. You do not need to redo the conversion.

Full / no-mug GLBs are display references. R104 collar OBJ meshes are a source-review proposal. Older torso/head CAD is labelled historical and does not yet contain the new collar.

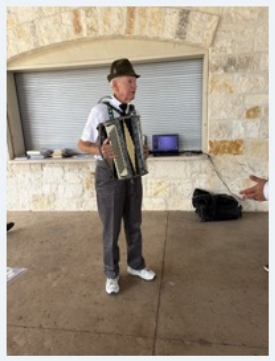

Better appearance: the neck belongs with the head.

Original collar landmarks guide the new paired section. No exterior smoothing. Fit, motion, native CAD and print checks remain pending.

Real characters. Original sources.

C001 Accordion Player

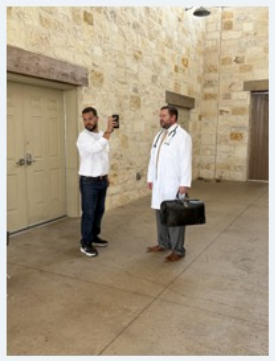

C002 Beer & Brat Man

C003 Dancing Couple

C004 Doctor

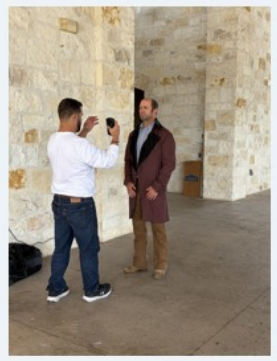

C005 Hirsch

C006 McDougal Soldier

C007 Meusebach

C008 Petsch

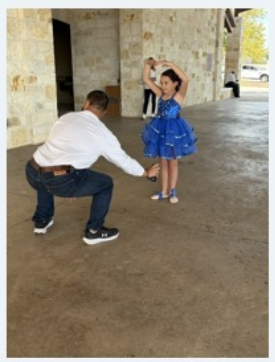

C009 Red Cowboy

C011 Sutton Ballerina

C012 Tuba Player

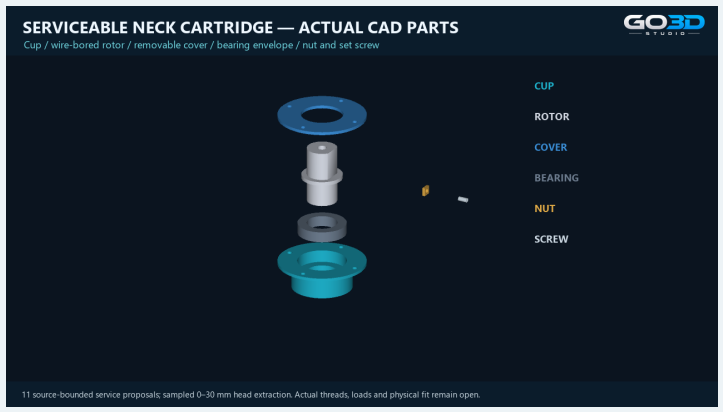

C013 Cowgirl in yellow

C014 Ketemoczy — INT

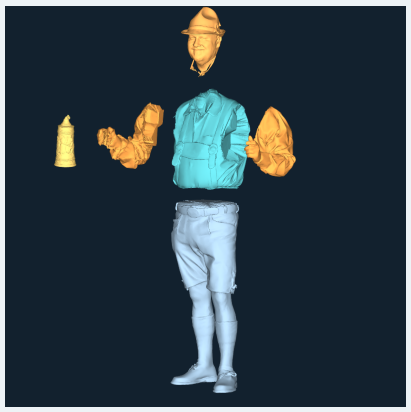

Source likeness
under review
No stand-in

Original references replace unreviewed stand-ins. Beer Man has the working beta tour. Collection likenesses and arms/waists are under reconstruction; the tuba mesh is the instrument alone. Choir reconstruction is last.

MODELED: wire bore, retention, service access.

Hardware envelope and geometric studies; final loads, harness installation and physical fit remain open.

Activate assembled beta 3D here

Compatible desktop PDF viewer required.

The accelerated program

After Beer Man is blueprinted: owner target 1-3 weeks or less for remaining digital reconstruction/review handoffs, with a one-week accelerated program target. Work continues independently of Bill's response.

Final integration resolves the details.

Visible overlaps are provisional. Final integration combines reconstructed masters with accepted internals, resolves interference and finalizes attachments such as the bowtie. Fixed joins are welded; moving/service interfaces stay separate. Clearance and print checks follow.

Digital target only; physical qualification remains separate.
